BUYERS GUIDE 2018

Sometimes, it's the tiniest among us who need the most nurturing to grow.

Optimize growth, minimize complications.

Premature infants begin life with decreased nutrient stores, altered gastrointestinal absorption, increased caloric expenditure, and a critical need for rapid growth.¹ Early and appropriate advancement of fortification is achievable with an exclusive human milk diet (EHMD) and has been associated with weight gain exceeding targeted standards, and length and head circumference growth meeting targeted standards.² When used as part of an EHMD, Prolacta's neonatal nutritional products are clinically proven to improve health outcomes^{3,4,5} for critically ill, extremely premature infants weighing between 500 and 1250 g* (1 lb 1 oz to 2 lbs 12 oz) at birth, in the neonatal intensive care unit, as compared to cow milk-based fortifier or cow milk-based preterm formula. So choose Prolacta. Help them grow. There's a great big wonderful life waiting for them.

neonatal solutions

Medela's holistic approach to human milk handling and delivery in the NICU reflects our decades of investment in human milk research. Our neonatal feeding system is specifically designed to preserve the integrity of human milk for neonates. And our education and clinical support is here to help ensure that the gold standard in infant food is matched by gold standard NICU practices.

Because for neonates, human milk is more than food—human milk is medicine

HeRO is a voice for the babies.

The infants say:

- My doctors make more informed diagnostic and therapeutic decisions with HeRO.
- Earlier identification with HeRO gets me home with my family faster.

The evidence says:

- HeRO has shown an association to neonatal outcomes including sepsis, UTI, cerebral palsy, delayed early cognitive development, necrotizing enterocolitis, and death.
- HeRO is associated with a reduction in length of stay among infected surviving VLBW infants.

INOMAX® (NITRIC OXIDE) GAS, FOR INHALATION

Because Every Moment Counts

A complete system with comprehensive care is included in your INOMax Total Care contract at no extra cost.

When critical moments arise, INOMax Total Care is there to help ensure your patients are getting uninterrupted delivery of inhaled nitric oxide.

- Over 18 years on market with over 700,000 patients treated¹
- Continued innovation for delivery system enhancements
- Emergency deliveries of all INOMax Total Care components within hours[†]
- Live, around-the-clock medical and technical support and training
- Ongoing INOMAX® (nitric oxide) gas, for inhalation reimbursement assessment and assistance included in your INOMAX contract
(Note: You are ultimately responsible for determining the appropriate reimbursement strategies and billing codes)

2017 EMERGENCY DELIVERIES¹

DRUG & DEVICE
2,700+ 

Indication

INOMAX is indicated to improve oxygenation and reduce the need for extracorporeal membrane oxygenation in term and near-term (>34 weeks gestation) neonates with hypoxic respiratory failure associated with clinical or echocardiographic evidence of pulmonary hypertension in conjunction with ventilatory support and other appropriate agents.

Important Safety Information

- INOMAX is contraindicated in the treatment of neonates dependent on right-to-left shunting of blood.
- Abrupt discontinuation of INOMAX may lead to increasing pulmonary artery pressure and worsening oxygenation.
- Methemoglobinemia and NO₂ levels are dose dependent. Nitric oxide donor compounds may have an additive effect with INOMAX on the risk of developing methemoglobinemia. Nitrogen dioxide may cause airway inflammation and damage to lung tissues.

- In patients with pre-existing left ventricular dysfunction, INOMAX may increase pulmonary capillary wedge pressure leading to pulmonary edema.
- Monitor for PaO₂, inspired NO₂, and methemoglobin during INOMAX administration.
- INOMAX must be administered using a calibrated INOMax DSIR® Nitric Oxide Delivery System operated by trained personnel. Only validated ventilator systems should be used in conjunction with INOMAX.
- The most common adverse reaction is hypotension.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit MedWatch or call 1-800-FDA-1088.

Please visit inomax.com/PI for Full Prescribing Information.

Visit inomax.com/totalcare to find out more about what's included in your contract.

^{*}INOMax Total Care is included at no extra cost to contracted INOMAX customers.

[†]Emergency deliveries of various components are often made within 4 to 6 hours but may take up to 24 hours, depending on hospital location and/or circumstances.

INOmax
Total Care®

INOMax[®] (nitric oxide gas)

Brief Summary of Prescribing Information

INDICATIONS AND USAGE

Treatment of Hypoxic Respiratory Failure

INOMax[®] is indicated to improve oxygenation and reduce the need for extracorporeal membrane oxygenation in term and near-term (>34 weeks) neonates with hypoxic respiratory failure associated with clinical or echocardiographic evidence of pulmonary hypertension in conjunction with ventilator support and other appropriate agents.

CONTRAINDICATIONS

INOMax is contraindicated in neonates dependent on right-to-left shunting of blood.

WARNINGS AND PRECAUTIONS

Rebound Pulmonary Hypertension Syndrome following Abrupt Discontinuation

Wean from INOMax. Abrupt discontinuation of INOMax may lead to worsening oxygenation and increasing pulmonary artery pressure, i.e., Rebound Pulmonary Hypertension Syndrome. Signs and symptoms of Rebound Pulmonary Hypertension Syndrome include hypoxemia, systemic hypotension, bradycardia, and decreased cardiac output. If Rebound Pulmonary Hypertension occurs, reinstate INOMax therapy immediately.

Hypoxemia from Methemoglobinemia

Nitric oxide combines with hemoglobin to form methemoglobin, which does not transport oxygen. Methemoglobin levels increase with the dose of INOMax; it can take 8 hours or more before steady-state methemoglobin levels are attained. Monitor methemoglobin and adjust the dose of INOMax to optimize oxygenation.

If methemoglobin levels do not resolve with decrease in dose or discontinuation of INOMax, additional therapy may be warranted to treat methemoglobinemia.

Airway Injury from Nitrogen Dioxide

Nitrogen dioxide (NO₂) forms in gas mixtures containing NO and O₂. Nitrogen dioxide may cause airway inflammation and damage to lung tissues.

If there is an unexpected change in NO₂ concentration, or if the NO₂ concentration reaches 3 ppm when measured in the breathing circuit, then the delivery system should be assessed in accordance with the Nitric Oxide Delivery System O&M Manual troubleshooting section, and the NO₂ analyzer should be recalibrated. The dose of INOMax and/or FiO₂ should be adjusted as appropriate.

Worsening Heart Failure

Patients with left ventricular dysfunction treated with INOMax may experience pulmonary edema, increased pulmonary capillary wedge pressure, worsening of left ventricular dysfunction, systemic hypotension, bradycardia and cardiac arrest. Discontinue INOMax while providing symptomatic care.

ADVERSE REACTIONS

Because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a drug cannot be directly compared to rates in the clinical trials of another drug and may not reflect the rates observed in practice. The adverse reaction information from the clinical studies does, however, provide a basis for identifying the adverse events that appear to be related to drug use and for approximating rates.

Controlled studies have included 325 patients on INOMax doses of 5 to 80 ppm and 251 patients on placebo. Total mortality in the pooled trials was 11% on placebo and 9% on INOMax, a result adequate to exclude INOMax mortality being more than 40% worse than placebo.

In both the NINOS and CINRGI studies, the duration of hospitalization was similar in INOMax and placebo-treated groups.

From all controlled studies, at least 6 months of follow-up is available for 278 patients who received INOMax and 212 patients who received placebo. Among these patients, there was no evidence of an adverse effect of treatment on the need for rehospitalization, special medical services, pulmonary disease, or neurological sequelae.

In the NINOS study, treatment groups were similar with respect to the incidence and severity of intracranial hemorrhage, Grade IV hemorrhage, periventricular leukomalacia, cerebral infarction, seizures requiring anticonvulsant therapy, pulmonary hemorrhage, or gastrointestinal hemorrhage.

In CINRGI, the only adverse reaction (>2% higher incidence on INOMax than on placebo) was hypotension (14% vs. 11%).

Based upon post-marketing experience, accidental exposure to nitric oxide for inhalation in hospital staff has been associated with chest discomfort, dizziness, dry throat, dyspnea, and headache.

DRUG INTERACTIONS

Nitric Oxide Donor Agents

Nitric oxide donor agents such as prilocaine, sodium nitroprusside and nitroglycerine may increase the risk of developing methemoglobinemia.

OVERDOSAGE

Overdosage with INOMax is manifest by elevations in methemoglobin and pulmonary toxicities associated with inspired NO₂. Elevated NO₂ may cause acute lung injury. Elevations in methemoglobin reduce the oxygen delivery capacity of the circulation. In clinical studies, NO₂ levels >3 ppm or methemoglobin levels >7% were treated by reducing the dose of, or discontinuing, INOMax.

Methemoglobinemia that does not resolve after reduction or discontinuation of therapy can be treated with intravenous vitamin C, intravenous methylene blue, or blood transfusion, based upon the clinical situation.

PRODUCTS AND SERVICES

Respondents were asked to select categories that applied to their companies. We used previous information for firms that didn't return forms. Also, if companies selected inappropriate or duplicate categories, we made a judgment call on the proper categories. Companies that returned forms have a customized listing of all their product categories in the alphabetical Companies section.

You'd Do Anything to Keep Them Safe

Start with the right IV technology to meet the special needs of neonatal patients

When it comes to caring for your most delicate patients, every detail matters. That's why we bring you a full line of IV therapy products with design features to help you maximize the safety and efficiency of neonatal care. From IV sets and low-profile connectors with minimal flush volumes to the smallest gauge straight catheter, only ICU Medical gives you access to infusion technology tailored to help you meet the special needs of your most precious patients.

Clave™ Connector Technology

Minimize infection risks with manifolds and stopcocks that incorporate clinically preferred¹ Clave connector technology

Custom Neonatal IV Sets

Save time while keeping your tiny patients safer from infection risk² with closed IV medication sets for syringe pump delivery

SuperCath™ 26G PIVC

Deliver safe and effective care with the smallest-gauge straight IV catheter, helping you access small, difficult vessels

To see how our specialized neonatal portfolio can help enhance the care of your most delicate patients, call 800.824.7890 or visit www.icumed.com

¹ 2016 GHX market data on single-sterile sales of standalone needleless connectors and single-sterile sales of extension sets with needleless connectors. ² Tanner J, Neonatal Intensive Care Journal, July-August 2012.
